

One Man Packing Station

Boomerang system

The boomerang system is ideal as a "one-person packing station" where a single operator can fill, seal, and palletize the cases from practically the same position.

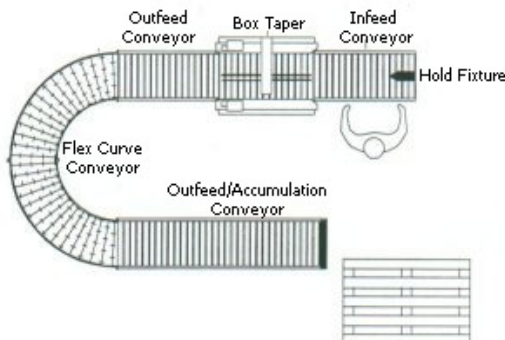

The One Man Packing Station, alias the Boomerang System, can generate tremendous labor/cost savings by allowing a single operator to pack, seal, and palletize cases. Its portability and flexibility assist in eliminating needless motion and fatigue. No electrical or air required – simply gravity powered. Can be used virtually anywhere and with any box taper.

The flexible curve allows for outfeed direction variability. The ROI on a system is usually a matter of weeks.

There are two standard systems to choose from and custom systems can be easily created.

System includes:

- One Machine Infeed Conveyor (1 m long)
- One Box Hold Down Fixture
- One Machine Outfeed Conveyor (1 m long)
- One Flexible Curve Conveyor
- One Outfeed/Accumulation Conveyor (2 m long)
- Adjustable Conveyor Supports & Connecting Hardware
- Box Taper can be purchased separately.

Item #	Width (mm)	Price*
450-180403	400	\$2350
450-180503	500	\$2475

**Prices subject to change without notice. Box Taper not included.*
